**FOR IMMEDIATE RELEASE**

## **Century Controls Announces CC-600 Enhancements**

*New 6" Grayscale Touch Screen Display and Siemens LMV3 Integration Compatibility*

**ROGERS, Minnesota — May 11, 2009** — Century Controls proudly announces further enhancements to the CC-600 Master Boiler Controller with features to save you time and money.

**NEW!** Siemens LMV 3 Flame Safety Integration

- Digital communications with Linkageless Burner Management System
- Seamless integration and startup
- One point access for all boiler information

**NEW!** Six-inch grayscale touch screen user interface

- Easy setup and configuration
- Graphical display of boiler operation and historical trending
- Display multiple parameters at the same time

Century Controls has expanded our relationship with Siemens Building Technologies, a world leader in burner management systems. Together, we have developed the interface between Century Controls CC-600 Boiler Master Controller and the Siemens LMV 3 Linkageless Burner Management System to provide two-way communication between the sequencer and points controlled by the LMV. We now can provide the best integrated boiler solutions for the entire Siemens LMV line. Century released the integrated LMV 51 and LMV 52 solution in September 2008.

Century Controls has also expanded its Human-Machine Interface (HMI) options. In addition to our eight-inch color touch screen display, we now offer a six-inch grayscale version to provide boiler owners with more choice regarding display size and cost. Display technology advances and cost reductions have increased the popularity of advanced HMI functionality in all control applications. Century's HMI offerings help to maintain a leadership position in the boiler controls market.

With the continuing increases in fuel prices, it is imperative that boiler users do everything possible to reduce fuel bills. In installations around the world, Century Controls' equipment is a proven way to reduce fuel costs and extend equipment life. This complete line of boiler controllers was designed by boiler experts using a proven, patented *smarter* algorithm that reduce energy bills
