FOR IMMEDIATE RELEASE

Century Controls Announces CC-600 Enhancements
Honeywell ControlLinks Integration Compatibility

ROGERS, Minnesota — October 15, 2009 — Century Controls proudly announces the enhanced CC-600 Master Boiler Controller with features to save you time and money.

NEW!

- **Honeywell flame safety integration**
- **Digital communications with ControlLinks Fuel/Air Ratio Control**
- **Seamless integration and startup**
- **One point access for all boiler information**

Century Controls has partnered with Honeywell, a world leader in burner management systems. Together, we have developed the interface between Century Controls CC-600 Boiler Master Controller and the Honeywell ControlLinks Fuel/Air Ratio Control to provide two-way communication between the CC-600 and points controlled by ControlLinks.

With the continuing increases in fuel prices, it is imperative that boiler users do everything possible to reduce fuel bills. In installations around the world, Century Controls' equipment is a proven way to reduce fuel costs and extend equipment life. This complete line of boiler controllers was designed by boiler experts using a proven, patented *smarter* algorithm that reduce energy bills by optimal coordination of the boilers and reducing the number boiler cycles -- taking energy savings straight to the bottom line. The algorithm makes the difference in the amount of money saved.

For over 30 years, Century Controls has developed superior systems that help boiler and air compressor owners save fuel, limit maintenance costs, while reducing greenhouse gas emissions. Century Controls has a proven product line and the ability to customize control sequences for applications in the boiler room. Find a Century Controls Authorized Representative in your area and additional product information online at www.centurycontrols.com.
